EDUCATION

AI/ML Engineering Course Certification

TripleTen

Graduated August 2026

Salt Lake City, UT

Bachelor of Science - Biomedical Engineering

Georgia Institute of Technology

Graduated May 2026

Atlanta, GA

SKILLS

Programming Languages Python | Java | C++ | C | C# | JavaScript/TypeScript | R | Scala | Rust
Technologies AWS | pandas | Docker | React.js | Flask | MySQL | MongoDB | NumPy | PyTorch
Git | Scikit-learn | Apache Spark | TensorFlow | Azure

EXPERIENCE

Self Employment

Since May 2022

PC Builder/Optimizer

Atlanta, GA

- Helped clients off my own personal website and through recommendations from satisfied customers design and build computer/server systems.
- Sourced parts to design systems within my customers' budgets while prioritizing performance and fitting their specific needs out of a computer system.
- Created my own set of windows optimizations and general PC optimization software to improve the overall performance of computer systems, remove unnecessary bloatware, and optimize windows processes.

EXIGO Technologies LLC

Feb 2026 - Jul 2026

AI Integration Engineer

Suwanee, GA

- Helped integrate AI tools into the workflow for this startup, tools including Zapier and Warp to help manage workflow and payroll.
- Taught startup employees how to utilize AI programming tools such as Claude, GitHub Copilot, and more to streamline development pipelines and projects.
- Developed an internal file summarization/query system using RAG methodology and DeepSeek-R1 as the LLM model.

South Forsyth HS

Jan 2023 - May 2025

Alumni FRC Mentor

Cumming, GA

- Was the lead programmer and electrician until my graduation in 2022. Following 3 FRC seasons I returned as an alumni mentor to teach current members and guide them through the FIRST Robotics Competition season.
- Taught programming team members basic software development concepts, source control, basic to intermediate Java, and the features of the FRC Java API and its libraries.
- Attended competitions with the active team each year to advise players during the competition, helping the team secure two back to back world championship qualifications.

NOTABLE PROJECTS

Stock Prediction App

March 2026 - Current

AI/ML Developer

Atlanta, GA

- Developing a stock prediction app with a set of 3 other developers to track stock market movements of popular stocks, track movements of public trades by successful stock traders, and provide information to increase the financial literacy of users.
- Utilized data science concepts to pull information of popular stocks, new upcoming stocks, and movements made by top traders. Took the pulled data and cleaned and processed it through a data pipeline to yield clean data to fine tune LLM model for our purposes.
- Utilized data processed through data pipeline to fine tune DeepSeek-R1 model to process stock market data and make predictions to suggest stocks to users. Additionally analyzes the movements of traders that are fed to it to learn why those movements were made by comparing with news headlines regarding the company.

eSports Organization Website

Jul 2026 - Aug 2026

Full Stack Developer

Atlanta, GA

- Individually developed a website for an upcoming North American eSports organization called Zodiac eSports.
- Created necessary pages and features to the owner's design, such as pages showcasing their individual teams, a home page showcasing new organization social media posts, page showing their staff, and a shop page.
- Integrated JavaScript features to the website pages to create an interactable shop that will allow you to process payments right in the website. Integrated MySQL as a backend database to allow website users to create profiles for easy information saving for checkout, sign up for newsletters, and other features that require users to create a profile.
